Toro Riding Lawn Mower

This riding lawn mower has twin bags and a 3 bushel capacity for grass or other yard waste. It is capable of cutting at 5 different height levels, and it has different speeds and can go in reverse. It includes the key and everything you see in the photos plus the original owners/operation manual.

I haven't used the tractor for about 4 years. Last I used it, it worked but had an idle problem that is probably caused by the choke cable which may need to be replaced. I installed a new carburetor but didn't get around to doing the choke cable. It's been stored in my shed ever since. It's an older model but saw very little use and was previously stored in a heated garage for several years. Obviously it will also need a battery. I don't intend on using it, and don't want to spend the time to get it running, so it's going cheap. Since it hasn't been run for a while, it's being sold as-is.
